CAPABILITIES STATEMENT

OPERATOR-LED MINING PARTNERSHIPS, OPERATIONAL IMPROVEMENT, SYSTEMS AND PRACTICAL DELIVERY SUPPORT

For scalable mining operations and services businesses.

AN OPERATOR-LED MINING PLATFORM

Wounded Bull Partners partners with mine owners, operators, investors and mining-services businesses to stabilise, improve and scale operations.

We can engage as an owner-operator, service provider, appointed director, consulting partner, or through related business involvement — whichever structure best serves the opportunity.

We embed experienced leadership directly on site to improve safety, productivity, cost control, visibility and scalable execution across surface, underground, processing and support infrastructure.

WHERE WE OPERATE

Major mining jurisdictions, with priority focus on Australia, Australasia and North America — plus capability to support selected opportunities across Africa, Southeast Asia, Europe and other emerging regions where the fundamentals and partnerships align.

EXCLUSIVELY MINING, END TO END

If it's a mine or supports a mine, it's in our wheelhouse. We bring highly relevant experience and an uncompromising commitment to safety and productivity to every project.

/01
Surface Mining
Open-pit and open-cut projects across a range of scales.

/02
Underground Mining
Hard-rock underground operations, including decline and shaft mines.

/03
Mineral Processing Plants
On-site facilities including mills, concentrators and heap leach.

/04
Drilling Performance & Consumables
Drill optimisation, operator training and consumables supply.

/05
Tailings, Water & Waste
Tailings execution, return-water systems, waste facilities and regulatory alignment.

/06
Processing & Metallurgy Interface
Mill optimisation in coordination with metallurgical leads.

/07
Infrastructure & Capex Delivery
Power supply, camp builds, workshops and haul roads — scoped, sourced and delivered.

/08
Maintenance & Reliability
Planning, execution, rebuilds and overhauls through PeakCPM Services.

/09
Governance & Reporting
Board reporting, site cadence, decision-rights clarity, risk registers and dashboards.

BUILT ON PRACTICAL EXPERIENCE

/01

Deep mining experience

Leadership made up of seasoned operators with extensive front-line and management experience in tough environments — open-pit, underground, processing plants and more. First-hand understanding of harsh conditions and complex challenges.

/02

Hands-on alignment & commercial flexibility

We put our own capital at risk and work on-site alongside mine teams, keeping incentives fully aligned. Where equity isn't the right structure, the same operator-led discipline applies through service delivery, board roles or executive involvement.

/03

Systems that enable scale

We identify the bottlenecks holding a mine back, then implement streamlined processes and robust management systems — maintenance scheduling, safety protocols, financial controls — that professionalise operations and sustain growth long after our involvement ends.

/04

Technology with a human touch

We leverage AI and automation to boost efficiency — never at the expense of people. Technology eliminates low-value tasks and enhances decision-making while preserving the human expertise and safety culture that make each operation successful.

WOUNDED BULL PARTNERS

THE STRUCTURE THAT FITS THE OPPORTUNITY

We engage through the structure that best aligns incentives and delivers the required outcome. In every case: leadership, systems, commercial discipline and accountability.

/01

Equity Partnerships / Joint Ventures

Our preferred lane — we co-invest and embed on site.

/02

Profit Share / Earn-In

Flexible, growth-aligned structures.

/03

Consulting & Advisory

Opportunity review, operating-model design, performance reset, governance support, systems review, mobilisation planning and practical implementation support.

/04

Service Partner / Fixed-Scope Delivery

Defined scopes under commercial terms — operational support, maintenance, drilling, training, consumables, workforce management, project controls.

/05

Strategic & Other Business Involvement

Shareholding, executive support, business-building, systems improvement, operational leadership or strategic partnership.

/06

Interim Operations & Governance Roles

Embedded support through transition, ramp-up, turnaround, mobilisation or recovery — site leadership, reporting cadence, work-front control.

OPERATIONAL CAPABILITIES

A comprehensive toolkit of operational and supporting capabilities — enabling us to execute turnarounds and growth plans end-to-end.

/01

Hands-on execution

Working side by side with mine personnel — from the pit and the underground face to the processing plant and workshops — providing leadership that drives real improvements in real time.

/02

Full-site operational management

Capability to take over and run entire mining operations — workforce management, mine planning and scheduling, maintenance planning, safety management, cost control and regulatory compliance.

/03

Commercial & contract controls

Contract administration, scope control, cost tracking, procurement visibility, claims support and margin protection — clearer visibility over commercial risk and delivery performance.

/04

Workforce management, training & retention

Attraction and retention planning, training frameworks, competency uplift, onboarding, role clarity and site leadership — supported by visible leadership, disciplined reporting and a zero-harm mindset.

SYSTEMS & SUPPORTING CAPABILITIES

THE OPERATING RHYTHM

Wounded Bull installs the rhythm behind site performance — reporting cadence, dashboards, finance and payroll visibility, recruitment workflows, safety and training systems, commercial controls, maintenance planning and governance decision cadence.

/05

Directorship & corporate governance

Board-level oversight, governance framework development and strategic direction — directorship roles, decision-rights clarity, risk oversight, reporting discipline and board-to-site alignment.

/06

AI & automation integration

Practical AI-enabled tools that reduce admin load and improve visibility — dashboards, workflow automation, candidate screening, asset tracking, meeting summaries and decision support. Technology supports the model; it never replaces on-site leadership.

/07

Mining supply & procurement

Reliable supply of critical inputs — ground support, ventilation, drilling consumables, fuel, spares — with coordinated logistics and on-site inventory management for safe, continuous operation.

/08

Marketing, asset perception & communications

Recruitment marketing, project updates, website and case-study support, tender positioning and asset messaging that reflects real operational progress — building confidence with partners, investors, regulators and stakeholders.

CAPABILITY, PROVEN IN PRACTICE

FACE Mining Services and PeakCPM are practical examples of service businesses developed and deployed by the team behind Wounded Bull. They demonstrate the capability behind our model — and where the structure and scope suit, they may be brought into an opportunity to support delivery.

UNDERGROUND DELIVERY

FACE MINING SERVICES

Fixed scopes of work, workforce management, supervision, training and consumables supply — practical underground capability, mobilisation support, safety systems and day-to-day execution under a defined scope.

MAINTENANCE & RELIABILITY

PEAKCPM

Maintenance planning, drilling performance and equipment reliability — targeted maintenance, operator training, drilling consumables, equipment rebuilds and overhauls to reduce downtime and sustain performance.

REBUILD & WORKSHOP

QMRC

Specialist equipment rebuild, repair and workshop support — component rebuilds, fabrication, machining and on-site mechanical labour. Heavy rebuild and technical workshop capability that improves reliability.

Where formal training is required, Wounded Bull coordinates with RTOs, digital providers or specialist partners to deliver competency-based programs within the agreed scope.

MORE THAN AN INVESTOR, CONTRACTOR OR ADVISER

An operator-led partner focused on stabilising operations, reducing chaos, protecting margin, improving visibility and building scalable mining businesses.

/01

Operator-led & experienced

Founded and run by mining operators, not career consultants or financiers — a practical approach delivered by professionals who know what works on-site.

/02

Aligned & high-trust partnerships

Whatever the engagement structure, we stay close to the operation and focus on shared outcomes across safety, productivity, cost control and long-term value.

/03

Results-focused mindset

Relentlessly focused on tangible results — tonnes mined, ounces produced, development advance, mechanical availability, cost per tonne, downtime and safety performance — often turning key metrics around within months.

/04

Proven track record of success

Demonstrated improvements across jurisdictions and operating conditions — stronger production, tighter cost control, improved availability and step-change gains in safety and operating discipline.

/05

Disciplined growth strategy

Growth-oriented but highly disciplined — building value through operational excellence, wise reinvestment and steady scaling that leaves each operation fundamentally stronger.

/06

People-first technology use

Practical technology, automation and AI-enabled tools reduce admin load, improve reporting and give site teams better visibility — dashboards, workflow automation, screening, asset tracking and decision support. It supports the model; it never replaces on-site leadership, judgement or safety discipline.

/07

Global reach with local expertise

Operating across major mining jurisdictions, with priority focus on Australia, Australasia and North America — and capability to support selected opportunities across Africa, Southeast Asia, Europe and other emerging mining regions.

/08

Market confidence & asset perception

Helping operations communicate progress, present the asset professionally, attract people, strengthen stakeholder confidence and build a clearer story about where the operation is heading.

/09

Practical systems & reporting discipline

Structure for complex operations — clear reporting cadence, practical dashboards, commercial visibility, defined decision rights and disciplined follow-through for owners, boards and site teams.

AN OWNER'S MINDSET, PROVEN OPERATIONAL CAPABILITY AND GENUINE PARTNER ALIGNMENT — HANDS-ON IMPROVEMENT AND DISCIPLINED MANAGEMENT THAT TURNS MINING OPERATIONS INTO STRONGER, SAFER AND MORE SCALABLE BUSINESSES.
